1. Scope

The Version Description Document (VDD) is the inventory document; similar to a packing list or a bill of lading. It itemizes change orders implemented between previous and current deliverables, and provides a sign-off statement from the CM development team that complies with required Changes and Configuration Management procedures to hand off the deliverable and its approved changes. The VDD speaks to additional functionality, changes in the technical infrastructure, and business purpose/mandate for a release.

The VA historically has collaborated with the developer/support person to produce the basic documentation packet. Thus, the VDD is not a release notes document, and does not negate the need for user-friendly release notes highlighting the major functional or operational changes. Also, the VDD is not to be published as part of the VA Software Document Library (formerly the VHA Documentation Library).

This VDD serves to certify the integrity of Patch PXR^M*2.0*42 (Increment 4) of the Mental Health Clinical Reminders (MHCR) Dialog Templates deliverable. Patch PXR^M*2.0*42 includes ten reminder exchange entries:

- Behavioral Couples Therapy for Substance Use Disorder (BCT-SUD),
- Cognitive Behavioral Therapy for Chronic Pain (CBT-CP),
- Contingency Management (CM),
- Motivational Enhancement Therapy (MET),
- Motivational Interviewing (MI),
- Offering of Evidence Based Psychotherapies (Offering),
- Acceptance and Commitment Therapy for Depression - Booster (ACT-D Booster),
- Cognitive Behavioral Therapy for Depression Booster (CBT-D Booster),
- Cognitive Processing Therapy Booster (CPT Booster),
- Prolonged Exposure Booster (PE Booster); and

associated Health Factors.

There are no formal Change Requests (CR) or VA CM processes associated with the MHCR Dialog templates project.

2. Certification

I, the Configuration Manager for this release, certify that the contents of the packaged release associated with this document are not in the rational toolset, but consist of artifacts archived/deployed in the NATREEM Environment for national deployment as patch PXR^M*2.0*42 of the MHCR templates.

The status of all Change Requests and Code Change Requests listed in this document in the Change Record Reports section have been verified to be consistent with what is reported herein.

3. Version Description

This release package consists of the patch PXR^M*2.0*42 for Increment 4 of the MHCR dialog templates, and documentation to date produced for the national deployment. The dialog templates are designed to operate seamlessly within VistA's CPRS. This VDD contains the enhancements that were completed and applied to the latest version of the VistA/CPRS software. All artifacts listed here are provided by VHA

MHS (previously OMHS) and Information Innovators Inc. (Triple-i). The VA CM was not involved, and the artifacts used to produce this delivery are not in the VA CM repository.

The package named “Patch PXR*2.0*42” and known as Increment 4 of the MHCR Dialog Templates consists of the following files to describe this release:

- PXR*2.0*42
- Installation Guide
- User Guide

The PXR*2.0*42 patch will be available for national deployment after the approval.

4. Change Record Reports

The PXR*2.0*42 MHCR templates were developed as part of the VA innovations program by MHS and Triple-i, and no change requests or records were opened to track the changes.

5. Inventory

Deliverable	Method	Location	Receiver	Description
PXR*2.0*42	Patch	(REDACTED)	VAMC sites may access as desired.	The patch will be made available for national deployment.

5.1. Electronic Media Released

There is no electronic media provided with this deliverable.

5.2. Physical Media Released

There is no physical media provided with this deliverable.

6. Acronyms and Abbreviations

Acronym	Definition
CM	Configuration Management
CPRS	Computerized Patient Record System (component of VistA)
CR	Change Request
MHA	Mental Health Assistant
MHCR	Mental Health Clinical Reminders
NPM	National Patch Module
OED	Office of Enterprise Development
QAP	Quality Assurance Plan
SQA	Software Quality Assurance

Acronym	Definition
VDD	Version Description Document
VistA	Veterans Health Information Systems & Technology Architecture

7. Supported Documents

These support documents (list may not be inclusive) are associated with the deliverable:

Document Name	Revision	Date
QAP	1.0	July, 2012
Master Test Plan	1.3	January, 2014
Test Evaluation Summary	xxx	xxx
Test Defect Log	xxx	xxx
SQA Testing Final Findings Report	xxx	xxx
MHCR Installation Guide	1.1	August, 2013
