The CPG uses and documents evidence based on medical practices jointly developed by DoD and the VA.</p>		
Target Environment Name: [REDACTED]	Servers Affected: MAE	Projected to move to downstream environment?
Version Description: <p>This R 1.0.1 of Preconception Care consists of the system or product build (i.e., the URL or repository location of the GOLD copy of the completed application code), all documentation, and applicable release notes produced to date by the FirstView Federal TS for the Veterans Health Administration. This includes final, customer accepted versions of documentation. This VDD contains the change record reports for defects and enhancements that were completed and applied to this R 1.0.1 of the Preconception Care. All artifacts listed here are contained within the FirstView Federal TS CM Version Management Archive. This executable was made with CM involvement, and therefore CM certifies the ability to reproduce it. All artifacts used to produce this delivery are in the CM repository and were managed by CM for producing the deliverable following CM processes and procedures.</p> <p>The package named "Preconception Care" consists of the following files to describe this release:</p> <ul style="list-style-type: none">• Preconception_MobileApplication_VersionDescriptionDocument_031914.docx• AllArtifacts_CM_<baseline_ID>.xls• Changed_New_Artifacts_CM_<baseline_ID>.xls. <p>The <mobile application name> version <version number> will be implemented at [REDACTED]</p>		

SCM Tool Information

The Atlassian tool suite is used for configuration and change management activities. Refer to the MAP Change Management Plan and the VAMF Configuration Management Plan for information on these processes. A waiver has been issued by the AERB for use of these tools. These tools are hosted in the VA Dedicated Cloud at Terremark, and the MAE falls under SDE control, with DJ Kachman as the CIO.

JIRA is used to track changes to the products, and Stash/Git is used to manage the source code.

Tool	Used For	URL direct to this build / version
JIRA	Tracking bugs, enhancements, user stories, and tasks	[REDACTED]
Stash / Git	Used for managing source code and readme files for developers	
Jenkins	Building the deployment packages	
Wiki	For storing documents - give the location of the files relevant for this release	Preconception Care Wiki Homepage

Reference to build instructions - <insert URL here> Provide the full URL information to the instructions for building the deployment package

List of files - attach the list of files that are being delivered and a list of files that changed in this release.

Issues Included in this Release

Release Inventory

If applicable, this section provides the inventory of material that is being released. This is required whenever the deliverable is component of a larger deliverable or a deliverable that contains multiple dependencies being documented within one VDD. Describe the method of delivery. Include where and to whom the deliverable was released.

Release Component	Description	Method of Delivery	Recipient	Location (Name of server deployed to)

Electronic Media Released

This section references and lists electronic media if it is applicable to the product.

Physical Media Released

Not applicable for VAMF deliverables.

Associated Supporting Documentation

This section is used to list all supporting documentation and is optional if a wiki space is defined above.

Document Name	Revision	Date	Link to Document if online
See above for reference to the Wiki location for the source			

Certification

When this document is approved, the following field will be filled in by the person approving. The document history can be checked to show who actually entered the information on this page.
