Service Dependencies

This app has dependencies on the following resources.

Data Source / JNDI	Type	References
Notification Services	Service (2.1.x)	Provides ability to create notifications, reminders and and set notification preferences
AuthorizationServices	Service (4.0.3+)	Provides authorization capabilities that support token-based authorization for the app
HealthAdapter	Service (3.3.x+)	Provides patient related links and access to MhpUser and Patient
Assessment Services	Service (1.0.0)	Provides ability to create caregiver assessments

Installation Instructions

Step 1: Copy the *Deployable Artifact* [care4cargivers-1.0.0.war](#) to the target environment's Veteran Apache server

Step 2: If care4caregivers already exists, delete the folder:

Remove Existing Version

```
# Remove any existing versions of care4caregivers
rm -rf /var/www/html/care4caregivers
```

Step 3: Install the new version of care4caregivers:

Example Install Script

```
# Create the care4caregivers directory and cd to the newly created directory
mkdir /var/www/html/care4caregivers
cd /var/www/html/care4caregivers

# Copy the release artifact _into_ the newly created directory
cp <ops-provided-file-location>/care4caregivers-1.0.0.war
/var/www/html/care4caregivers/.

# Unzip the contents
unzip care4caregivers-1.0.0.war

# Remove the zip file
rm care4caregivers-1.0.0.war
```

Step 4: Double check the permissions of the care4caregivers directory and chown / chmod according to the environment's STIG

Step 4: Add a link to the care4caregivers on the Veteran Proxy server (e.g. /etc/httpd/conf/httpd.conf)

Proxy Configuration

```
ProxyPass /care4caregivers http://<ops-provided-location>/care4caregivers
ProxyPassReverse /care4caregivers http://<ops-provided-location>/care4caregivers
```

Step 5: Restart the httpd service to apply the proxy configuration changes

Launchpad Script

Care4Caregivers can be added to the launchpad using the following script:

launchpad-insert-my-va-health.sql

```
// Replace the <UNIQUE_APP_NUMBER> with actual numeric number based on the increment
from the launchpad table.

insert into hadb.launchpad_item (NAME, ITEM_MODE, TYPE, ITEM_POSITION, DESCRIPTION,
URL, IMAGE_URL)
values
('Care4Caregivers',
'VETERAN',
'APP',
<UNIQUE_APP_NUMBER>,
'Care for caregivers',
'/care4caregivers',
'/care4caregivers/_assets/images/app-icons/care4caregivers-icon.png');

commit;
```

Validation

To validate that it is working, navigate to [https://\[REDACTED\]](https://[REDACTED]) You will receive a page that contains the application's (EULA) End User License Agreement.
