

User Workflow Overview

Upon entering eHMP sign in page, the user selects his or her facility from the drop down menu and enters in the appropriate access code and verify code combination. The user then selects the "Sign In" button in an attempt to gain access into the eHMP application.

Validation Rules

- 1.) All three (3) fields are required prior to signing in. Once all items are completed, the user may select the "Sign In" button to gain access into the application.
- 2.) Facility - The user must choose one of the items from the drop down menu
- 3.) Access Code/Verify Code - Both of these fields are alpha numeric. The user must input an accurate access code and verify code combination.
 - The app will validate the Access code is activated in the system and validate that the Verify Code is appropriate one for that access code.
 - If at least one (1) field is not filled out or was not correctly completed, the focus will navigate to the first item with the validation error, and the validation error/directions are read.
