

**User Workflow Overview**

Tile sorting allows the user to rearrange the tiles within an applet in order to organize the data to fit his/her needs. The user may rearrange the tile by using the Drag and Drop method or by using the arrows on the keyboard.

<sup>1</sup> The user can only sort tiles in the Trend View of applets (with the exception of those applets that have the “pill” format in the Trend View).

<sup>2</sup> Once the user moves one tile manually, the header will indicate that the applet tile is in a manual order in the table header.

**DISCLAIMER:** This workflow is used for reference only and is NOT a part of the official list of deliverables to the VA.
