

Request/Payload Description

1. SPA sends request to API on behalf of User.
2. SPA uses JWT provided by the OAuth2 server which is stored in user Cookie.
3. Resource Server receives request and extracts JWT from Authentication Header.
4. Resource Server sends JWT to OAuth2 Server for validation.
5. OAuth2 Server validates JWT matches original issued Token
6. Once validated, resource server carries out request, sends requested info back to SPA.
